Una nueva forma de vivir la cocina: una encimera única en la que se puede cocinar, trabajar y cocinar alimentos con total seguridad, para disfrutar exclusivamente de lo mejor del día, sin preocupaciones. La zona de cocción mediante inducción permanece oculta a la vista, pero se integra perfectamente debajo de la placa de gres, sin necesidad de realizar cortes: esto facilita la limpieza de la encimera de cerámica.

La higiene y la resistencia al calor y a los productos químicos, unidas a la practicidad de mantenimiento, hacen que Level sea la solución ideal para ofrecer las más altas prestaciones de calidad en un diseño de vanguardia para todo tipo de ambientes.

ABSOLUTE QUALITY FOR INCOMPARABLE FINISHES.

Meticulous measures and controls throughout the entire production chain ensure that high-quality slabs are produced. From an aesthetic point of view, the selection of the best materials and the colouring of the wet mixtures guarantee that the surfaces have a highly uniform colour; additionally, the very high-resolution images and highly precise polishing processes give the polished versions striking shades and a vibrant shine, making them extremely reflective. From a performance point of view, pressing at maximum levels makes the finished materials extremely compact, while a firing cycle that is much slower than is generally the case reduces the tension of the slabs to a minimum. Consequently, Level unfinished materials boast incomparable levels of ductility, flatness and resistance. They are more suitable than other materials for cuts, incisions and other finishing work to create surfaces, furnishing accessories and other design objects.

Qualità assoluta per lavorazioni impareggiabili.
Accorgimenti e controlli minuziosi lungo l'intera filiera produttiva assicurano una qualità assoluta delle lastre. Dal punto di vista estetico, la selezione delle migliori materie e la colorazione degli impasti ad umido garantiscono la massima omogeneità cromatica delle superfici; in aggiunta, la definizione delle immagini ad altissima risoluzione e processi di levigatura di altissima precisione contribuiscono a renderle ricche di sfumature, vibranti di luce ed estremamente riflettenti nelle versioni levigate. Dal punto di vista delle prestazioni, la pressatura ai massimi livelli rende i materiali finiti estremamente compatti, e un ciclo di cottura molto più lento di quelli comunemente adottati riduce al minimo il tensionamento delle lastre. È così che i semilavorati Level possono vantare livelli di duttilità, planarità e resistenza impareggiabili, prestandosi molto meglio di altri materiali ai tagli, alle incisioni e alle altre lavorazioni finali per la creazione di superfici, oggetti di arredo e altri complementi di design.

La qualité absolue pour des réalisations inégalables.
Les mesures mises en œuvre et les contrôles minutieux effectués tout au long de la filière de production assurent la qualité absolue des dalles. Sur le plan esthétique, la sélection des meilleures matières et la coloration par voie humide des pâtes garantissent l'homogénéité optimale des couleurs des finitions. Par ailleurs, la définition des images à très haute résolution et les procédures de polissage de la plus haute précision contribuent à leur donner cette richesse de nuances, vibrantes de lumière et infinitement miroitantes dans les versions polies. Sur le plan des performances, le pressage maximal permet d'obtenir des matériaux finis extrêmement compacts. Par ailleurs, un cycle de cuisson beaucoup plus lent que ceux habituellement utilisés réduit au minimum la mise sous tension des dalles. Dès lors, les produits semi-finis Level bénéficient d'un niveau inégalé de ductilité, de planéité et de résistance. Ils se prêtent ainsi beaucoup mieux que d'autres matériaux aux découpes, aux incisions et autres façonnages finaux pour la création de surfaces, d'objets de décoration intérieure et d'accessoires de design.

Absolute Qualität für Unvergleichliche Bearbeitungen.
Wirksame Maßnahmen und akribische Kontrollen in der gesamten Produktionskette stellen die absolute Qualität der Platten sicher. In ästhetischer Hinsicht gewährleistet die Auswahl bester Rohstoffe und die Färbung der Massen in nassem Zustand maximale farbliche Homogenität der Oberflächen; außerdem sorgen die hochauflösenden Bilder und die hochpräzisen Schleifverfahren für eine große Vielfalt an leuchtenden Farbnuancen, die in den polierten Ausführungen eine extrem reflektierende Optik besitzen. Der maximierte Pressvorgang macht das Material extrem kompakt und der im Vergleich zu den üblicherweise angewendeten Brennverfahren sehr viel langsameren Brennzyklus reduziert die Spannung der Platten auf ein Minimum. Aus diesem Grund besitzen die Halbfertigprodukte Level einen unvergleichlich hohen Grad an Verarbeitungsflexibilität, Ebenheit und Robustheit, so dass sie weit aus besser als andere Materialien für das Schneiden, Gravieren und andere Endbearbeitungen und damit zur Fertigung von Oberflächen, Einrichtungselementen und anderen Designaccessoires geeignet sind.

Calidad total para realizar mecanizados inmejorables.
Mediante la adopción de medidas, soluciones y controles minuciosos en toda la cadena de producción, se garantiza la calidad total de las placas. Desde el punto de vista estético, la selección de las mejores materias primas y la coloración de la masa en húmedo garantizan la máxima homogeneidad cromática de las superficies. Además, la definición de las imágenes de altísima resolución y los procesos de pulido de altísima precisión contribuyen a enriquecerlas con numerosos matices y a volverlas muy luminosas y altamente reflectantes en las versiones pulidas. Desde el punto de vista de las prestaciones, el prensado al máximo nivel hace que los materiales acabados sean extremadamente compactos, mientras que el ciclo de cocción mucho más lento de lo habitual reduce al mínimo las tensiones en las placas. Estas son las razones por las que los semielaborados Level ofrecen niveles de ductilidad, planidad y resistencia inigualables y, por tanto, son mucho más idóneos que otros materiales para el corte, la incisión y otros mecanizados finales para crear superficies, objetos de decoración y otros complementos de diseño.

GREENGUARD

The GREENGUARD Certification process provides an in-depth review and analysis of chemical emissions from manufacturers' products. Using dynamic environmental chamber testing, products are tested for volatile organic compounds (VOCs), including formaldehyde, and over 300 other VOCs with health-based limits. GREENGUARD Certified products aid in the creation of healthier indoor environments, and release fewer pollutants that can contribute to health issues including asthma and other respiratory issues. To remain certified, products undergo comprehensive certification testing on an annual basis, giving consumers peace of mind that they are selecting products that support better human health. Recognized and referenced by over 400 codes, rating systems, and procurement policies worldwide, the GREENGUARD Certification requires that products meet some of the world's most rigorous and comprehensive limits for low emissions of volatile organic compounds into indoor environments. The GREENGUARD Gold standard includes health-based criteria for additional chemicals and requires lower total VOC emissions levels to ensure that products are acceptable for use in environments such as schools and healthcare facilities. In addition to limiting emissions of more than 360 VOCs and total chemical emissions, GREENGUARD Gold Certified products must also comply with requirements of the State of California's Department of Public Health "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from known as California Section 01350.

NSF

The NSF Food Equipment certification program has 22 different standards that set minimum food hygiene and protection requirements for the materials, design, manufacturing, construction and performance of equipment for handling and processing food. The materials for solid surfaces are examined based on the "NSF / ANSI 51: Food Equipment Materials" standard, which specifies the public health requirements for materials used in the construction of commercial food equipment. More information is available on the website: info.nsf.org/Certified/Food

The full, up-to-date list of certified products can be viewed at www.nsf.org. Please contact the Emilceramica Group for any further information.

Il programma di certificazione NSF Food Equipment ha 22 diversi standard che stabiliscono i requisiti minimi di protezione e igiene alimentare riguardo ai materiali, la progettazione, la fabbricazione, la costruzione e le prestazioni delle attrezzature per la manipolazione e il trattamento degli alimenti. I materiali per superfici solide vengono esaminati in base alla "NSF / ANSI 51: Materiali per attrezzature alimentari", che specifica i requisiti relativi alla salute pubblica per i materiali utilizzati nella costruzione di attrezzature alimentari commerciali. MESH-MOUNTED SLABS LASTRE STUOIATE

All Level slabs in the 6.5 mm and 12 mm thicknesses are also available in mesh-mounted version.

Fibreglass is applied to the underside of mesh-mounted slabs to increase their mechanical and bending strength and simplify shaping operations.

Tutte le lastre Level in spessore 6,5mm e 12mm sono disponibili anche nella versione stuoiata.

Il processo di stuoiatura consiste nell'apporre sul retro della lastra una fibra di vetro che ha il compito di incrementare la robustezza meccanica della lastra, di renderla più resistente alle flessioni, e di agevolare le operazioni di lavorazione della stessa.

Toutes les dalles Level de

Alle Level-Platten in Materialstärke 6,5 mm und 12 mm sind auch in der Version mit Glasfasernetz erhältlich.

Das Laminieren mit Glasfaser besteht darin, ein Glasfasernetz auf der Plattenrückseite aufzubringen, um die mechanische Festigkeit der Platte zu erhöhen, sie biegefester zu machen und ihre Bearbeitung zu erleichtern.

6,5 mm et 12 mm d'épaisseur sont également disponibles avec filet en fibre de verre.

Dans ce cas, un filet en fibre de verre est appliquée au dos de la dalle pour augmenter sa solidité mécanique, pour la rendre plus résistante aux flexions et pour faciliter son façonnage.

Todas las placas Level de 6,5 mm y 12 mm de grosor se hallan disponibles también en la versión con red de fibra de vidrio.

El proceso de aplicación de la fibra de vidrio consiste en colocar en la parte de atrás de la placa una red de dicho material con el objeto de incrementar la solidez mecánica de la placa, hacerla más resistente a las flexiones y facilitar las operaciones de elaboración de la misma.
